

# FlexBio Technologie

## Your reliable partner

### ADVANTAGES

- Fast determination of potentials
- Meaningful results
- On-site examinations
- Continuous online measurement
- Simple upscaling
- Customer-friendly design
- Accompanying lab investigations and technical support

### CONTACT

FlexBio Technologie GmbH

### PRELIMINARY TESTS

- On-site examinations
- Trials in our technical scale
- laboratory tests

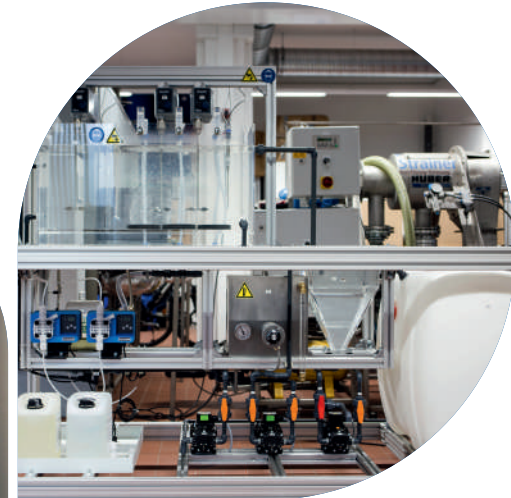

## Recognize your potential !

# Mobile pilot plant - Try us!

By using our mobile pilot plant, an effective demonstration of efficient and up to date wastewater treatment is achieved. Furthermore, trial operation on site enables effective potential determination under practical conditions. In addition, planning errors are avoided and process optimization already takes place during the preliminary test. The demonstration plant is able to carry out procedural adjustments to the specific wastewater and evaluate process variations effectively during trials. The system is completely mounted on a trailer and enables us to demonstrate the function and performance of our process. The mobile pilot plant is dimensioned in such a way that an up-scaling to a larger system is possible.

Our technical center also offers the „full program“. You provide the waste water or the biomass and we carry out all necessary examinations so that you receive meaningful results. In all pilot plants various parameters such as biogas yield, COD cleaning performance and nitrogen elimination can be measured and recorded. In addition, regular sampling takes place to allow accurate documentation of the results. The scope of service can be adjusted according to customer requirements.

The preliminary tests are accompanied by continuous laboratory analyses. These ensure an optimal understanding of your wastewater and, moreover, the detailed data basis offers a very high level of planning security for later projects.

## APPLICATIONS

- Food industry
- Beverage industry
- Meat processing
- Industrial wastewater
- Waste recycling
- Farms
- Paper industry
- Municipal wastewater
